Rotaract Club of Xiamen University Malaysia | Rotary Club of Kuala Lumpur Dynamics | Rotary Club of Tun Razak Exchange

SDC Hackathon

Technical Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

SDC HACKATHON 2026

Technical & Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club
Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. Team & Project Overview

Team Name	Fast as Fahhhh
Project / Solution Name	QuoteFlow
Name (Leader)	Lim Xin Jie
Email & Phone (Leader)	limxj0208@gmail.com & 011-35396866
University Affiliation(s)	EDUVO Academy
Live Prototype URL	https://fast-as-fahhhh-20.replit.app/#/
Code Repository URL (public / access granted to judges)	https://github.com/lxj17035/Fast-as-Fahhhh2.0

2. Architecture & Technology Stack

2.1 System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

A customer sends an enquiry through Telegram. The FastAPI backend stores the message in PostgreSQL and loads the relevant business and client context. It calls RunPod's hosted GLM-5.3 Public Endpoint to extract requirements and suggest quotation items and clarification questions. The backend validates the AI output and saves an editable draft.

Staff uses the JavaScript web interface to review messages, clarify missing details, and submit the draft. Manager enters prices, saves the quotation, and reviews the ReportLab-generated PDF through PDF.js, together with the matching Telegram summary. After explicit Manager approval, the backend sends the PDF and summary to the original Telegram chat and records the delivery outcome and activity in PostgreSQL.

Replit hosts the web application. A Node.js web entry serves the frontend and proxies API requests to the private FastAPI backend. AI credentials remain server-side. If AI is unavailable, users can prepare the draft manually. AI cannot set prices or approve delivery.

2.2 Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
Python 3.12+	Backend programming language	PSF License
JavaScript ES modules, HTML5 and CSS	Frontend interface and interactions	Web standards; no separate library license
Node.js 22.13+	Frontend web server and backend API proxy	MIT
FastAPI 0.160.0	Backend API framework	MIT
Uvicorn 0.54.0	Runs the FastAPI application	BSD-3-Clause

Name & Version	Purpose in Project	License
Pydantic 2.14.1	Validates requests and structured data	MIT
SQLAlchemy 2.1.6	Database access and transactions	MIT
Psycopg / psycopg-binary 3.3.6	PostgreSQL database driver	LGPL-3.0-only; retain bundled notices
HTTPX 0.28.1	HTTP requests to external APIs	BSD-3-Clause
ReportLab 4.4.9	Generates quotation PDFs	BSD license
Pillow 13.0.0	Image support for PDF generation	MIT-CMU
PDF.js / pdfjs-dist 6.4.299	Displays quotation PDFs in the browser	Apache-2.0
tzdata 2026.5	Timezone data for date handling	Apache-2.0; retain included data notices
pytest 9.1.1	Automated backend testing	MIT
pypdf 6.10.0	Checks generated PDF content during testing	BSD-3-Clause

3. APIs & Cloud Services

3.1 External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API & Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
RunPod GLM-5.3 Public Endpoint — RunPod	Extracts customer requirements and suggests quotation items, missing information and clarification questions.	Credit-based usage using the team's RunPod account credits
Telegram Bot API — Telegram	Receives customer enquiries, sends Staff clarification replies, and delivers quotation PDFs and summaries after Manager approval.	Free standard Bot API usage

3.2 Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
Replit	Hosts the frontend web server and FastAPI backend.	Plan: Paid Region: Asia
Replit PostgreSQL	Stores enquiries, business/client context, quotation versions, delivery records and activity.	Plan: Free
RunPod — GLM-5.3 Public Endpoint	Provides hosted AI inference for requirement extraction and quotation draft suggestions.	Plan: Free

Service & Provider	Purpose in Project	Plan / Region

4. AI Tools, Models & Datasets

4.1 AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	Source / Provider	Usage (pre-trained / fine-tuned / self-trained)	License / Terms
GLM-5.3	Z.ai; accessed through RunPod's hosted Public Endpoint	Pre-trained; API inference only. No team fine-tuning or training.	GLM-5.3 License and RunPod Terms of Service

4.2 Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
None	None	None	None	None

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)

4.3 AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

[/] Yes ☐ No

If yes, list them below:

Tool & Version	**Used For**	**Extent of Use (minor / moderate / major)**
GPT-5.5	Research and Markdown documentation	Moderate
Claude Sonnet 5.5	Research and Markdown documentation Design the Frontend	Moderate
GPT-6.1 Sol	Code generation and bug fixes	Major
Gemini 4 Argon	Animation generation for presentation material	Minor

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

Our team reviewed AI-generated code, documentation and presentation material before use. We checked technical claims against the repository and implementation records, edited generated text, and corrected identified errors. We checked code through backend and frontend tests, mocked API integration tests, and browser checks. We kept local test results separate from live-provider verification and did not present unmeasured benefits as achieved results. The team remains responsible for the submitted code, content and declarations.

5. Sponsor-Provided Resources

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

[/] Yes ☐ No

If yes, list them below:

Sponsor	Resource (API / credits / platform / data)	How It Was Used in the Project
RunPod	Sponsor-provided credits and hosted GLM-5.3 Public Endpoint API	Used for AI inference to extract customer requirements and suggest quotation items and clarification questions.
Replit	Sponsor-provided platform access / credits	Used to deploy the frontend and FastAPI backend, store application data in Replit PostgreSQL, and manage credentials through Replit Secrets.

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

Replit and RunPod support the prototype's core workflow. Replit hosts the web application and PostgreSQL database, while RunPod provides AI inference for requirement extraction and quotation drafting. These resources are important to our current deployment, but they could be replaced by another hosting platform, PostgreSQL provider and compatible AI service. If AI is unavailable, QuoteFlow also supports manual quotation preparation.

6. Security, Privacy & Responsible Use

6.1 Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

The prototype uses fictional business profiles, customer records and enquiries for a supervised demo. Telegram chat identifiers and message metadata are stored to associate enquiries and deliver approved replies. Enquiry text and relevant business/client context are sent to RunPod for AI processing. Application records are stored in Replit PostgreSQL. Credentials remain server-side in Replit Secrets and are not exposed to the frontend. Staff/Manager roles are simulated, not production authentication. No automatic retention or deletion period is currently implemented; a retention policy is required before using real customer data.

6.2 Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

AI may misinterpret enquiries, omit details or suggest unsupported information. The backend validates structured output, preserves unknown fields and leaves prices blank. Staff reviews suggestions, and only Manager can price and approve quotation delivery.

RunPod availability, quota and rate limits may interrupt AI processing. Configurable token and daily request limits bound usage, while a labelled manual draft allows work to continue when AI fails. Quotation versions and saved-review checks help prevent approval of stale content. Pending or unknown delivery outcomes block repeat sends to reduce duplicate delivery.

Testing uses synthetic examples and does not establish accuracy across all industries, languages or customer groups. Staff and Manager roles are simulated, and production authentication and per-business isolation are not implemented. Full hosted Telegram and provider acceptance remains unverified.

7. Compliance & Readiness Checklist

Tick all boxes that apply before submitting.

- [/] All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.
- [/] All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.
- [/] No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.
- [/] Any use of generative-AI tools for development has been disclosed and reviewed by the team.
- [/] Any use of official SDC sponsor resources has been declared in Section 5.
- [/] The prototype described here is accessible to judges through the links provided in Section 1.
- [/] All fields in this template have been completed within the word limits stated.

8. Declaration

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team's knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.
